

**zberg02:** hey man

**ThinkComp:** hi

**zberg02:** your facenet thing is hot

**ThinkComp:** thanks

**zberg02:** how do i add you as a friend

**ThinkComp:** go to the main thing and just type greensp

**ThinkComp:** into the center box

**ThinkComp:** it's obviously got room for improvement :-)

**ThinkComp:** such as adding one at a time

**ThinkComp:** hehe

**zberg02:** one at a time?

**ThinkComp:** like you just wanted to

**zberg02:** oh right haha

**zberg02:** did you code this yourself?

**zberg02:** it looks like it has the greenspan touch

**ThinkComp:** yeah

**zberg02:** cool

**zberg02:** are you using graphviz for visualizations?

**ThinkComp:** i'm trying but it keeps rebooting my damn server.

**zberg02:** weird

**ThinkComp:** so i basically shut it off for now

**zberg02:** you're on linux?

**ThinkComp:** yeah

**ThinkComp:** did you compile it with freetype?

**zberg02:** na

**zberg02:** what distro are you using/

**ThinkComp:** it's old

**ThinkComp:** sun cobalt red hat 5

**zberg02:** hmm okay

**ThinkComp:** really, really old.

**ThinkComp:** this server is from 2000.

**zberg02:** yea i'm using rh9

**zberg02:** so what i did

**ThinkComp:** it's doing ok for a 300MHz AMD chip though :-)

**zberg02:** was reinstall tcl and tk

**zberg02:** v8.4 on those

**ThinkComp:** i'm not even compiling those packages i don't think

**ThinkComp:** maybe i should though.

**zberg02:** i can send you source package i used for graphviz but it's probably different

**ThinkComp:** it's ok, i've got a bunch

**ThinkComp:** thanks though

**ThinkComp:** at&t people seem pretty stumped

**ThinkComp:** i am too

**zberg02:** haha yea

**zberg02:** they're helping you out?

**ThinkComp:** yeah

**ThinkComp:** they've been really nice

**zberg02:** that's cool

**zberg02:** just randomly?

**ThinkComp:** it'll work perfectly three times in a row

**ThinkComp:** and then crash on the fourth  
**ThinkComp:** or on the seventh  
**ThinkComp:** it seems totally random  
**zberg02:** what are you using to generate the svgz?  
**zberg02:** neato?  
**ThinkComp:** neato, but i'm not using SVG.  
**zberg02:** oh right  
**zberg02:** you're doing pdf  
**ThinkComp:** yeah  
**zberg02:** i guess pdf is more universal haha  
**ThinkComp:** yep :-)  
**zberg02:** i got the thing working over a year ago for my friend who made buddyzoo  
**ThinkComp:** cool  
**zberg02:** and then i just reused the code i had written for that  
**ThinkComp:** it's a nice program  
**ThinkComp:** if only it didn't break :-)  
**zberg02:** yea haha  
**zberg02:** how do i add a course as my favorite?  
**ThinkComp:** go to criticalmass  
**zberg02:** i'm clearly bad at this  
**zberg02:** yea i'm in that  
**ThinkComp:** no, it's not you.  
**ThinkComp:** the UI needs work  
**ThinkComp:** under Lists  
**ThinkComp:** my favorite list i think?  
**zberg02:** oh right  
**zberg02:** gotcha  
**zberg02:** no that's pretty obvious  
**zberg02:** i just browsed to the course profile  
**zberg02:** thinking that there would be a link there  
**ThinkComp:** yeah there should be  
**ThinkComp:** you may run into a bug with the ranking once you add the first course...  
**ThinkComp:** i've gotta fix that.  
**zberg02:** eh get one of your people to do that haha  
**ThinkComp:** there are no other programming people  
**ThinkComp:** heh  
**ThinkComp:** just marketing  
**zberg02:** so what's going to happen next year?  
**ThinkComp:** and membership  
**ThinkComp:** someone's gonna learn how to code with my software :-)  
**zberg02:** are you going to keep running any of this stuff after you graduate?  
**zberg02:** it would probably be better not having to play by harvard's rules haha  
**zberg02:** anyhow, i need to go learn some psych before wednesday  
**zberg02:** i'll let you know if i think of anything that i had to deal with while making graphviz work  
**zberg02:** bye bye
